LABEL PUNCHING MACHINE

Suitable for high level label production with precision. It's totally hydraulic-operated, with a push-cube self-adjusting to every position of the "V" hold where the pack is positioned in order to obtain an homogeneous pressure and distribution of the paper. The hollow-punch is easily held by T clamps; every adjustment allowing the perfect centring of the image is made by the "V" hold. Which is micrometer adjusting in transversal, longitudinal and rotation way, and a motorized adjustment in vertical.

Such has a photoelectric cell which gives maximum safety to the operator and allows a quick change of the hollow punch and is adaptable both for low and medium production. For strokes number per minute, for largest dimensions of labels and for Hydraulic power installed.
